                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 7, Application US/08909965C
Patent No. 5936078
GENERAL INFORMATION:
APPLICANT: Kuga Ttesro
APPLICANT: Nakagawa Satoshi
APPLICANT: Sakaki yoshiyuki
APPLICANT: Zhao Nanding
APPLICANT: Hashida Hideji
TITLE OF INVENTION: NOVEL DNA, NOVEL POLYPEPTIDE
TITLE OF INVENTION: AND NOVEL ANTIBODY
                                                                                                                                                                                                                                                                       APPLICANT: Rosen et al
TITLE OF INVENTION: 98 Human Secreted Proteins

Based upon the presence of a Xhol site followed by a run of 14 or
more T residues at the beginning of the sequence, this clone was
polyadenylated. The resulting Poly-T sequence has been removed. hit

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

New Drosophila tumor necrosis factor molecule, useful in controlling agriculturally important pests, e.g. comprises modifying the growth, feeding or reproduction of crop-damaging insects or insects of farm
                                                                                                                                                                                                                           Claim 6; Fig 3A-C; 119pp; English
                                                                                                                                       animals
```

The invention describes an isolated tumour necrosis factor polypeptide

(TNF). The polypeptide and polynucleotide are useful in controlling
agriculturally important pests, particularly by modifying the growth,
feeding and/or reproduction of crop-damaging insects or insects of farm
animals. The polypeptide and polynucleotide are useful for modulating
cepithehial morphogenesis, cell-matrix adhesion in flies and mammals. Thus
the polypeptide and polynucleotide may be useful for treating,
ameliorating or preventing X-linked anhidrotic (hypohidrotic) ectodermal
dysplasia and X-linked anhidrotic (hypohidrotic) ectodermal
ike disorders, e.g. sparse hair, abnormal or missing teeth or sweat
like disorders, e.g. sparse hair, abnormal or missing teeth or sweat
cland aberrations in animals (e.g. insects and potentially humans),
endotoxic shock, inflammation, haemorrhagic necrosis of tumours,
cytotoxicity and obesity-linked insulin resistance, all of which involve
TNF molecules. This is the amino acid sequence of the Drosophila
melanogaster tumour necrosis factor variant 2 protein, described in the invention

Sequence 409 AA;

The invention describes an isolated tumour necrosis factor polypeptide

(TNF). The polypeptide and polynucleotide are useful in controlling
agriculturally important peets, particularly by modifying the growth,
feeding and/or reproduction of crop-damaging insects or insects of farm
animals. The polypeptide and polynucleotide are useful for modulating
cepithelial morphogenesis, cell-matrix adhesion in files and mammals. Thus
the polypeptide and polynucleotide may be useful for reating,
ameliorating or preventing X-linked anhidrotic (hypohidrotic) ectodermal
dysplasia and X-linked anhidrotic (hypohidrotic) ectodermal
dysplasia.

Inke disorders, e.g. sparse hair, abnormal or missing teeth or sweat
gland aberrations in animals (e.g. insects and potentially humans),
endotoxic shock, inflammation, haemorrhagic necrosis of tumnours,
cytotoxicity and obesity-linked insulin resistance, all of which involve
TNF molecules. This is the amino acid sequence of the Drosophila
melanogaster tumour necrosis factor variant 1 protein, described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä

agriculturally important pests, particularly by modifying the growth, feeding and/or reproduction of crop-damaging insects or insects of farm animals. The polypeptide and polynucleotide are useful for modulating epithelial morphogenesis, cell-matrix adhesion in files and mammals. Thus polypeptide and polynucleotide are useful for modulating the polypeptide and polynucleotide may be useful for treating, ameliorating or preventing x-linked anhidrotic (hypohidrotic) ectodermal dysplasia and x-linked anhidrotic (hypohidrotic) ectodermal dysplasia and x-linked anhidrotic (hypohidrotic) ectodermal gland aberrations in animals (e.g. insects and potentially humans), endotoxic shock, inflammantion, haemorrhagic necrosis of tumours, cytotoxicity and obesity-linked insulin resistance, all of which involve TNF molecules. This is the amino acid sequence of the Drosophila melanogaster tumour necrosis factor protein, described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TTRVSHLDKELKSLKRVVDNLQQRLGINYLDEFDEFQKEYENALIDYPKKVDGLTDEEDD 120

                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therepeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), axpressed DNA ABR72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention describes an isolated tumour necrosis factor polypeptide (TNF). The polypeptide and polynucleotide are useful in controlling agriculturally important pests, particularly by modifying the growth, electing and/or reproduction of crop-damaging insects or insects of farm animals. The polypeptide and polynucleotide are useful for modulating capturalized and polynucleotide are useful for modulating the polypeptide and polynucleotide are useful for reating. Thus the polypeptide and polynucleotide may be useful for treating. Thus the polypeptide and polynucleotide may be useful for treating. Thus the polypeptide and polynucleotide may be useful for treating. Thus the polypeptide and polynucleotide may be useful for treating. Thus the polypeptide and polynucleotide may be useful for treating. Thus the polypeptide and polynucleotide may be useful for treating. Cytotocaic and x-linked animidatotic (hypohidrotic) ectodermal dysplasia-like disorders, especially humans), endocatic and obesity-linked insulin resistance, all of which involve TNF molecules. This sequence represents a tumour necrosis factor peptide useful as an antigenic epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tumour necrosis factor; TNF; pesticide; crop-damaging insect; farm animal insect; epithelial morphogenesis; cell-matrix adhesion; X-linked anhidrotic (hypohidrotic) ectodermal dysplasia; X-linked anhidrotic (hypohidrotic) ectodermal dysplasia-like disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New Drosophila tumor necrosis factor molecule, useful in controlling agriculturally important pests, e.g. comprises modifying the growth, feeding or reproduction of crop-damaging insects or insects of farm

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes an isolated tumour necrosis factor polypeptide and polynuclectide are useful in controlling agriculturally important pests, particularly by modifying the growth, feeding and/or reproduction of crop-damaging insects or insects of farm animals. The polypeptide and polynucleotide are useful for modulating epithelial morphogenesis, cell-matrix adhesion in flies and mammals. Thus the polypeptide and polynucleotide are useful for modulating ameliorating or preventing X-linked anhidrotic (hypohidrotic) ectodermal dysplasia and x-linked anhidrotic (hypohidrotic) ectodermal dysplasia and x-linked anhidrotic and potentially humans), and aberrations in animals (e.g. insects and potentially humans), endotoxic shock, inflammation, haemorrhagic necrosis of tumours cytotoxicity and obesity-linked insulin resistance, all of which involve the model of the state of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the ser
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mouse, Zis-SR; neuroendocrine phenotype, diabetes, zinc finger protein,
Parkinson's disease, Alzheimer's disease, neurodegenerative disease,
zinc finger splicing with extended Ser-Arg domain, secretory pathway.

The invention relates to an isolated nucleic acid molecule, Zis-SR, encoding a protein involved in the secretory pathway in a cell ( or its homologue or variant) or nucleic acid molecules that hybridise under high stringency condition to the Zis-SR nucleic acid. Also included are an isolated polypeptide involved in the formation of secretory granules in cells comprising the amino acid sequence spanning amino acids 243-310 of the Zis-SR protein, restoring the neuroendocrine differentiation of a cell using the nucleic acid molecule or polypeptide cited above, independentlying a gene and/or protein involved in inducing regulated secretion-defective cell line under conditions that restore differentiation of the secretion-defective cell, such that secretion is restored, and the secretion-defective cell, such that secretion is restored, and the secretion-defective cell, such that secretion is restored, and the secretion candulating the secretion in a cell comprising and an assay to identify a modulating the secretion in a cell comprising and a sessesment of a biological activity of Zis-SR, its part or derivative in the presence of a candidate agent, where a modulation of regulated secretion is selected when the biological activity of Zis-SR, its part or derivative is measurably different in the presence of the candidate or complated are useful for regulating neuroendocrine phenotype, and for properties of a cell, for regulating neuroendocrine phenotype, and for properties of a cell, for regulating neuroendocrine phenotype, and for long term thearapies to treat diseases or conditions associated with a loss of function, e.g. disbetes, neurodegenerative diseases such as a loss of function, e.g. disbetes, neurodegenerative diseases such as longered per expresence of polypeptides are useful for regulating diseases. The assay is useful for defect in the regulated secretory abhways in cells. The nucleic acid molecules can also be used to locate gene regions associated with a defect in the present sequence represents mountse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             KRVVD-----NLQQRLG-----INYLD-----EFDEF---QKEYENALIDYPKK 110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New Zis-SR nucleic acid molecules and polypeptides, useful for restoring or increasing the secretory properties of a cell, or for treating diseases or conditions associated with a loss of function, e.g. diabetes

The Bax gene of the invention is useful for identifying Baxresistant yeast or fungi, identifying, or obtaining and identifying Candida spp. sequences that are differentially expressed in a pathway eventually leading to programmed cell death or identifying inhibitors or inhibitor sequences of Bax induced cell death. The products of the invention have cytostatic, fungicide; immunosuppressive, virucide and vasocropic activity and can be used in vaccines or for gene therapy. The isolated nucleic acids, polypeptides, pharmaceutical compositions, antisense molecules and antibodies are useful as medicaments or in

preparing a medicament for modifying the endogenic flora of humans and other mammals. The vaccine is useful for immunising against yeast or fungal infections. Apoptosis-related diseases include autoimmune disease, ischaemia, diseases related with viral infections or neurodegenerations. This sequence represents a polypeptide associated with the Bax gene described in the disclosure of the invention

by chromosome 2 of the human malarial parasite, plasmodium falciparum. Also described are: (1) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II): (I) and polyclonal antisers or a monoclonal antibody raised to imfection. (I) and polyclonal antisers or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Farthermore, (I) (sepecially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum. Sequencing of the coldentify drug resistance in P. falciparum. Sequencing of the coldentify drug resistance in P. falciparum. Sequencing of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA70287 and AAB18144 to AAB18352 crepresent nucleotide and protein sequences given in the present invention, but which are not specifically mentioned within the

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA agquences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ------SSGSDSDAEGPSDQRNQSINNANTSSSL 128

The present amino acid sequence is the human RNA-associated protein-8 (RNAAP-8), identified in Incyte clone 869138, derived from LUNGASTO1 library. It is expressed in reproductive, nervous, gastrointestinal and heematopoietic/immune tissues. It has cytostatic, immunosuppressive, antinflammatory, antiarteriosclerotic, hepatotropic, keratolytic, neuroprotective, antipsoriatic, anti-HIV, antiallergic, antirheumatic, virucide, antibodies are useful for diagnosis of diseases associated with altered expression or activity of RNAAP. It is used to treat cell proliferative, autoimmune, inflammatory and infectious disorders, like actinic keratosis, bursitis, arteriosclerosis, artherosclerosis, cirrhosis, hepatitis, myelofibrosis, mixed connective tissue disease chematoid arthritis, uveitis, Crohn's disease, and bacterial, viral and parasitic infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12;
